# THE COMPANY

Founded in Miami by Ruddle Sinigaglia, Futurehead Group provides consulting services to merchants, helping them to accept crypto-currency, digital payments and integrating them into their bank accounts. We believe that cryptography and blockchain technology will fundamentally change the way society and the banking system work together in the coming years.

# OUR VALUES

From the beginning, we have been firmly convinced that there is a different way to establish values. Our commitment to creating a lasting impact means that we work hard at unearthing the fundamentals that drive business and markets over the long term. By living and implementing our values, we create a lasting impact on the teams, companies and communities to which we belong.

Social Responsibility

Independence

Integrity

Determination

Experience

Results

Our currency will have the valuable advantage of having three pillars that will lay the foundation for its growth. Five companies that, hand in hand, will lead us to a sustainable, profitable and useful type of business.

# OUR PORTFOLIO

- Futurehead Coin Trust

- Futurehead Coin

- Futurehead BDET

- Futurehead Group

# Futurehead Coin Trust

We are a new concept of Decentralized Finance (DeFi). DeFi seeks to develop small traditional financial pieces but with an extra degree of transparency and decentralization. These small pieces, as if they were Lego pieces, are combinable with each other, in order to develop an entire ecosystem of small solutions that together form a great solution for finances that invalidate the need for centralized and opaque financial institutions that they no longer add value.

## SOLUTION

Cryptomatic ATM provides ready-to-go ATMs, Crypto ATMs with Cryptocurrency, Pawnshop Networks, develops technical specifications for the ATMs as part of the Crypto Futurehead ATM & Cryptomatic ATM package for all customers who want to start this business. The systems eliminate the standard problems of cryptographic ATM exchanges and bank related business by giving more value to our Futurehead Currency.

## FUTUREHEAD GROUP & CRYPTO COIN

- Collateral with digital currency.
- Self-service solutions.
- We provide self-service terminals ready to be launched,
- self-service networks, as a special art of the FUTUREHEAD
- cryptographic ATM hardware package.

## EXCHANGE AND COMMERCE SECTOR

The spot trading system works, supports various forms of trading, such as flat trading, spot trading and so on, supports the correct purchase of Fiat currency, and there is no minimum amount limit. Support IEO, mining and staking trade, liquidity aggregation, Fiat trading system, Leverage Trading System, OTC system, etc.

# Advantages of using FHCT

- The main advantages are the de-targeting of the financial system, through a secure and accessible network throughout the world. **Futurehead Coin Trust** will convert the centralized finance structures that we have now, into decentralized structures, without trusted third parties, executed on smart contracts or **smart contracts**, within a blockchain where a written and unalterable record of each action performed is transparently reflected.

# Problem To Solve

## No bank!

Thanks to Futurehead Coin Trust (DeFi), you won't need to be banked, you won't need to carry dozens of papers, stand in lines to deliver them, and wait weeks for a response. Instead, from the comfort of your sofa, with your smartphone, you can do the whole process of receiving the money in your possession.

# Smart contracts!

- They work based on blockchain technology and smart contracts. They are very safe. This is due to the fact that they use powerful cryptographic techniques to ensure that the platform, access, and use of them can be carried out only by authorized persons.
- They have high levels of decentralization. DeFi's greatest potential is its high level of decentralization. That is, they have the ability to act without the need for a bureaucratic chain to impose itself over the functions of the platform.
- No trust in third parties. This means that action on a platform is direct between the user and the platform itself. Trusted third parties are unnecessary because that task will be performed by the blockchain. It is this structure that will keep the record of everything in a secure and immutable way.
- Transparent Another great feature of the Futurehead Coin Trust is its transparency. As they are built on free software, each line of code on the platforms is auditable. In addition, resource mobilizations are auditable, because they all take place on the blockchain.
- Without Borders. Access to a DeFi platform has no borders. You can be in any country in the world and access its services without inconvenience.

# Case of use

## Uniswap

Uniswap is a decentralized cryptocurrency exchange (also known as a decentralized exchange) that facilitates automated transactions between cryptocurrency tokens on the Ethereum blockchain through the use of smart contracts. As of October 2020, Uniswap is estimated to be the largest decentralized exchange and the fourth largest cryptocurrency exchanger overall by daily trading volume.

## Trust Wallet

The safest and most reliable multi-currency wallet Trust Wallet is for you if you have to solve the following problems: Buy Bitcoin in less than 5 minutes Earn more cryptocurrencies while holding Your personal information is never stored Exchange your cryptocurrencies without leaving the application Follow the charts and prices inside the wallet. Keep your cryptocurrencies safe from hackers and scammers

## Etherscan

Etherscan is the leading BlockChain Explorer, Search, API and Analytics platform for Ethereum, a decentralized smart contract platform. With Etherscan, you can produce ERC20-based tokens and allow you to monitor the amount of token production, the name of the token, and all the transactions you will perform with the token. You can use Ethereum-based tokens on your systems under your own name. Through Etherscan, you can check tokens, see how many transfers and transactions have taken place, and find out how many people have their accounts. There are no blockchains like all tokens and cryptocurrencies on the Ethereum network. Instead, they use the Ethereum blockchain.

# Case of use

## MetaMask

User interaction with blockchain DApps such as Ethereum requires a bridge, and that is precisely what MetaMask does. MetaMask is an extension or plugin for web browsers that allows users to easily interact with DApps on the Ethereum blockchain. This is possible, because MetaMask acts as a bridge between DApps and web browsers, facilitating their use and enjoyment. Thanks to this, users are able to easily use these distributed applications and all in an integrated way from their favorite browser. With support for Firefox, Chrome, Opera, and Brave, MetaMask has brought the world of DApps closer to the general public.

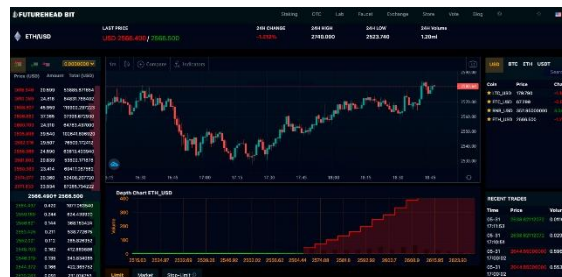

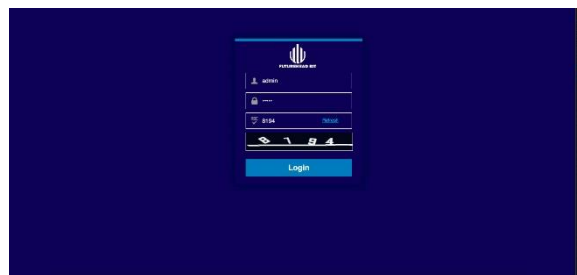

## NFT

A non-fungible token TNF (also known by the acronym NFT, non-fungible token in English) is a special type of cryptographic token that represents something unique; the tokens in the fungibles in the son, therefore, mutually interchangeable. This contrasts with cryptocurrencies like bitcoin, and many more useful tokens that are naturally fungible. The four main characteristics of NFTs are that they are unique, indivisible , transferable and with the ability to prove its scarcity.

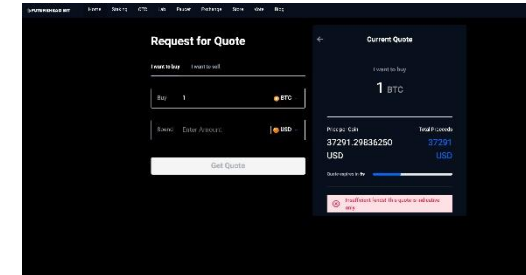

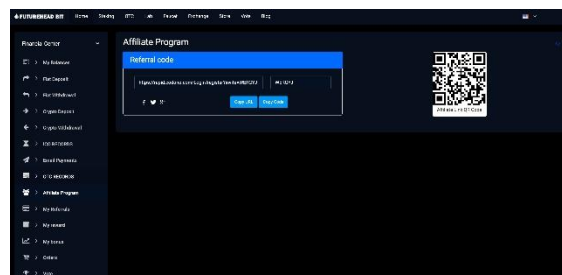

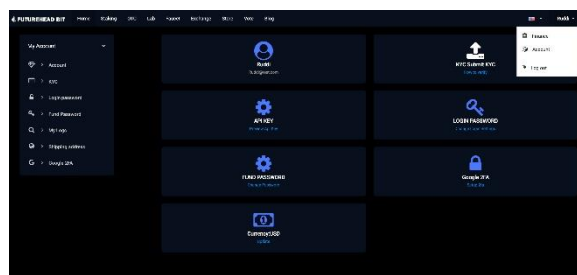

# What is FHCT trading?

The FHCT currency - it is our service token. By paying the fee with FHCT token, you reduce your trading costs. Only one button separates you from this. Reduce trading fees and instantly increase profits Watch! You can only use FHCT on your trading scale.
